A classic film and television works for the prototype class building role-playing game, players play as if to return to Star Wars in the world of film, the face of enemies and opponents, must be brave in the hands of the laser sword and laser weapon destroy them. This is the classic and fun movie with the combination of blocks. As a special way to show players wonderful space of war, I think young players or older players will have a different game experience, following Xiaobian to follow This happy world of star the game in full view of the 3D screen presented to the player is very science fiction scene space, in the background props and character design completely using Lego standard blocks, a variety of building blocks family and combined scenes, people in the feeling of more than some novel. I think many players are familiar with the LEGO brand, and lego blocks are more popular with players, this for the whole music building blocks of great looks super atmosphere of the universe war, all people amazing again and again. The game uses two modes of operation, namely touch gliding screen and virtual fixed button, when the player chooses the fixed button, will appear in the virtual screen rocker and four skill keys: When the player chooses to touch the sliding screen, then no buttons will appear. Virtual buttons are very convenient and clear, players can go, attack, jump or help after necessary; and touch gliding screen is freer to control variability and complexity. Two modes have their own advantages, compared to beginners with a fixed button to operate better, but for all types of God speaking veteran speaking, with a free screen sliding more flexible and beautiful. The biggest feature of the game is the combination of film and Lego, a lot of players have played a small class of high class Lego, so these blocks will have a special type of emotion, the game will be human and classic masterpieces together. Although the blocks are the main body, but the transformation of different scenes and characters, the expressions are made in place, and the game has more than 120 types of characters, so players do not have to worry about the elderly to see repeated. In addition to the static scenes of the game and the wonderful characters in the fight even more fun. Players use the light sword to kill the enemy, the enemy will be broken into a variety of blocks, which makes people feel surprised when it lasts Granted. Of course, the game is also a very bright picture of the fight, the characters of martial arts movements and a variety of light superposition effects, so that players seem to be facing a real fight. There is no limit to the game, the player basically must follow the movie plot to go into some rooms or channels with the enemy to fight, and also have to collect all sorts of props to open the door leading to the next room. In addition to independent control of the situation, the game there is a lot of animation transition, as well as to re-experiment a classic story of Star Wars, these animations will allow players to tell the story of the game more understanding the background. In general, this is a game to make Star Wars FAN, if you do not have a cold war on Star Wars, I'm afraid it will feel less fun, after all, the game interspersed with a lot of Star Wars story in general.
